SUMMARY

Seasoned freelance software developer with experience in building impactful, resilient and performant backend systems. With a scientific degree and a knack for hard problems, always looking for the next meaningful and creative challenge to pursue.

EXPERIENCE

Senior Software Developer

Commend

January 2026 - Present

- Feature development, legacy code refactoring and performance optimizations through embedded programming in Kotlin.
- Optimizing memory consumption through static code analysis and design improvements by reevaluating established assumptions.
- Roadmap planning and first development steps to migrating the whole system to Rust.

Lead Software Developer

evoila

April 2024 - Present

- Acted as the lead automation developer for Broadcom (former VMware) engineering automated CI/CD pipelines leveraging infrastructure-as-code principles, ensuring the deployment and upkeep of private, on-premise based environments using the VMware virtualization suite.
- Co-designed and implemented a distributed microservice-based backend cluster handling e-commerce processes such as order management, payment processing, and inventory synchronization, integrating the latest Java and Spring versions with tools such Docker, RabbitMQ and Greylog.
- Formulated comprehensive training materials and guided interdisciplinary engineering teams through practical Golang use cases, significantly elevating internal proficiency and streamlining project delivery across multiple cloud solution initiatives.

Senior Software Developer

Deployflow

September 2025 - March 2026

- Co-designed and led the implementation of a Golang-based API wrapper around a proprietary LLM for a startup resulting in improved sales through a now expanded product suite.
- Leveraged tools such as Gin with gRPC, Kafka, Kubernetes and MongoDB to create a cluster capable of pipelining requests with webhook-based notification capabilities, fast inter-service communication and client-specific data modelling.
- Ensured high availability through architecting with an emphasis on project-specific load factors, stress testing and detailed observability.

Senior Software Developer

Quantox Technology

January 2025 - January 2026

- Planned, co-designed and implemented a system to track the lifecycle of spare parts at Volvo Cars to comply with the newly appointed EUDR regulation resulting in every spare part sold being labeled and tracked until delivery to the end customer, ensuring full traceability, regulatory adherence, and streamlined recall management across international supply chains.
- Designed internal developer guidelines on software development best-practices such as coding, testing and observability guidelines.
- Mentored and onboarded new developers to the project through weekly presentations and onboarding sessions.

Software Developer

OSB AG

September 2022 - April 2024

- Developed, deployed and maintained a web application for company resource management using Spring Boot for the backend and Angular for the frontend interfaces, streamlining operations and enhancing user experience.
- Improved database query speeds by up to an order of magnitude by rethinking established query designs, ORM performance, careful indexing and execution plan analysis.
- Established a successful monitoring solution using Grafana with Prometheus, which offered unique and valuable insights into app usage, bottlenecks and common user behavior, to prioritize optimizations on the most impactful matters.

Software Developer

Freelance

January 2018 - September 2022

- Engineered robust APIs and deployed dynamic web applications for diverse freelance clients, leveraging advanced development skills to deliver secure, scalable and performant solutions in time.
 - Focused on clear and timely client communication in various languages such as German, French, Croatian and English, clarifying requirements and streamlining development processes.
 - Experience in coordinating tasks with teams of various backgrounds, time zones and sizes, from solo development to large, cross functional international teams.
-

EDUCATION

Bachelors in Mathematics and Computer Science

Aix-Marseille University · Marseille, France

SKILLS

Hard Skills: Go, Python, Rust, Kotlin, Java, TypeScript, Angular, Docker, Kubernetes, RabbitMQ, Kafka, AWS, Azure, GCP, Linux, Shell Scripting, Jenkins, Argo CD, Azure DevOps, Github Actions, Gin, Fibre, Spring Boot, Maven, Gradle, Serverless, PostgreSQL, MySQL, MongoDB, IBM Db2, MariaDB, NoSQL, Redis, Pytorch

Soft Skills: Clear Communicator, Peer Coaching, Collaborative Problem-Solving, Concise Writer

Languages: English, French, German, Croatian, Serbian
